

*Stevia rebaudiana* Bertoni, a plant from South America and indigenous of Paraguay, has shown several biological effects and healthy properties, although it is especially used in South America and some Asiatic regions.

Mostly known as a natural sweetener, almost 300 times sweeter than sucrose, the plant is also being attributed to its phytoconstituents prominent antioxidant, antimicrobial, antidiabetic (antihyperglycemic, insulinotropic, and glucagonostatic), antiplatelet, anticariogenic, and antitumor effects.

In this sense, this work aims to provide an extensive overview on the historical practices of stevia and its effects in human health based on its chemical composition and applications for both food and pharmaceutical industries.

Article Title: *Stevia rebaudiana* Bertonii bioactive effects: From in vivo to clinical trials towards future therapeutic approaches, Salehi et al.
